Main goals.
- To see if the tools installable by non – tech users.
- To see if the tools is usable.

Tests.
- "To see if the tools installable by non – tech users" refers to install and use test.
- "To see if the tools is usable" refers to implementation test.

Implementation test.
- There are two respondent, both acting exclusively.
  - Determine dynamic amount of respondent to get one-on-one conversation with.
  - Determine fixed amount of respondent of social scientists (or anybody who know how to read data).
- Get into one-on-one conversation.
- Give output data into social scientists.

Install and use test.
- Check respondent background.
  - If they have technical background refer to auto installation and manual installation.
  - If they have no technical background refer to auto installation.
- Test with Raspberry PI client.
  - Setup two Raspberry PI clients.
  - Test through wizard.
- Test with web client and web server.
  - Setup client name.
  - Test user interface awareness on *dt_value*.
- Note in every hurdles each respondents experienced.
